

Management of Leaf Curl Disease in Tomato

Leaf curl disease, also known as, Tomato yellow leaf curl, incited by Tomato yellow leaf curl virus (TYLCV) = Tomato leaf curl virus (ToLCV or TLCV), is one of the major diseases of tomato in Tripura. The disease causes considerable amount yield loss (Fig.). In order to manage it was found that frequent spray (at 7 days interval) of insecticide, like Cypermethrin (0.01%) or

Dimethoate (0.1%) is effective to minimize the disease by controlling the vector pest (white fly, *Bemisia tabaci*) attack.
